

Excalibur

Fork Truck Service Lifts

Increase Safety and Productivity at the Same Time!

The patented Excalibur cantilever-style lift provides a safe, unobstructed platform for faster and easier servicing of both standard and Class 2 (low-profile) forklift trucks weighing up to 20,000 lbs.

This is one of the few lifts that allows 100% access to all rolling parts including the tires, brakes, wheel bearings, steering and differential.

Features such as mechanical automatic safety locks every 1 3/4", zero free fall in the event of a severed hose, extended hose life, and toe guards help to provide a safe working environment for your maintenance personnel. **Call us**

today to learn more about the Excalibur lift and how it can help to increase safety and productivity in your maintenance department.
